

SAVE THE DATE

The symposium will address the most pressing issues facing the computer and telecommunication industries as well as research communities:

The large energy consumption associated with the ever increasing internet use and the lack of efficient renewable energy sources to support it.

Green Photonics Symposium at Technion

April 23-24, 2014

- Energy problems in data-com systems
- Energy problems in computers: from systems to the chip level
- Advanced solar energy harvesting

The symposium is organized by Professor Dieter Bimberg and Professor Gadi Eisenstein and is funded by the Reinhard Frank Foundation.
